- \_\_\_ N - Width of Body (maximum at Top Bout)
- \_\_\_ O - Width of Body (maximum at Lower Bout)
- \_\_\_ P - Width of Body (minimum at Mid Bout)
- \_\_\_ Q - Length of End Pins (Top and Lower Bout)

Cutaway fill desired? \_\_\_\_\_ (tracing required)

Describe all knobs, irregularities or other protrusions on body which will affect the case padding (tracing required) For each element define protrusion depth and locate it on the tracing noting what surface the protrusion extends from. \_\_\_\_\_

## MEASURING INSTRUCTIONS

STEP 1: Place the instrument on a flat surface; raise the body by placing a 1/2 inch block under the body at the heel.

STEP 2: Measure and record all measurements in one set of units (either inches or millimeters). Take measurements to the nearest 1/16" or 1mm. Provide a detailed description of any elements on your instrument which will require special cut outs in the foam

STEP 3: Trace the shape of your instrument body using reasonably heavy paper or light cardboard. Cut out your tracing and insure that it accurately defines the shape of your instrument body. Provide the cut-out to your dealer with the order form. Cases can be made without a tracing; however, we want to provide you the best fit possible, a tracing is required to accomplish this objective. If you do not provide a tracing the final fit may not meet your requirements.
